## **Information Evening – Elementary District Programs**

---

Parksville, BC – January 20, 2015

As a follow up to the District’s Strategic Planning, and supporting flexible learning, an information evening for parents and guardians of elementary school students has been scheduled. The evening will showcase four different program opportunities that the District would like to offer students in their elementary years in School District 69.

☛ **Elementary Collaborative Education Alternative Program (CEAP) - Grades K – 7**

The CEAP program provides yearly/term learning plans and is available from a distance or with face to face learning sessions for students.

☛ **Elementary French Immersion Program - Grades K – 7**

The Elementary French Immersion Program is part of a dual-track school where the two strands of learners are educated in French with opportunities built throughout each week to interact between the strands.

☛ **Proposed Primary Outdoor Education Program – SOLE (Sustainable Outdoor Learning and Exploration)**

This proposed program provides young children with the opportunity to learn in natural outdoor settings where they can play, explore, and experience natural systems and the environment.

☛ **Proposed Science, Technology, Robotics, Engineering and Making Program (STREAM) - Grades 5 – 7**

This proposed program has been designed for students with an aptitude, passion and curiosity for how things work by using science and technology as a scaffold on which the foundational and extended learning is based as per the newly revised BC curriculum.
