

Tracking Student Progress

Both students and parents can access Moodle to track student progress....

A great way to do this is to access the "Outline Report" for the course in question. To do this follow these steps:

- From the course in question, go to navigation
- Click on Participants
- Click on your (or your child's name)
- Scroll down and click on "Outline Report"

The Outline Report breaks every course unit down by lesson/quizzes/projects/etc and lets students (and parents) know how many times each has been viewed as well as the date of most recent access. For students to best find where they left off in a course, they can look to the date of most recent access.
